Tutorial Assignment 2

Sean Leggett - BDA201 February 3, 2020

Quesion 1

Use the summary() function to produce a numerical summary of the variables in the data set

Answer:

```
carsfile <- mtcars
summary(carsfile)
```

```
##       mpg             cyl             disp             hp       
##  Min.   :10.40   Min.   :4.000   Min.   : 71.1   Min.   : 52.0  
##  1st Qu.:15.43   1st Qu.:4.000   1st Qu.:120.8   1st Qu.: 96.5  
##  Median :19.20   Median :6.000   Median :196.3   Median :123.0  
##  Mean   :20.09   Mean   :6.188   Mean   :230.7   Mean   :146.7

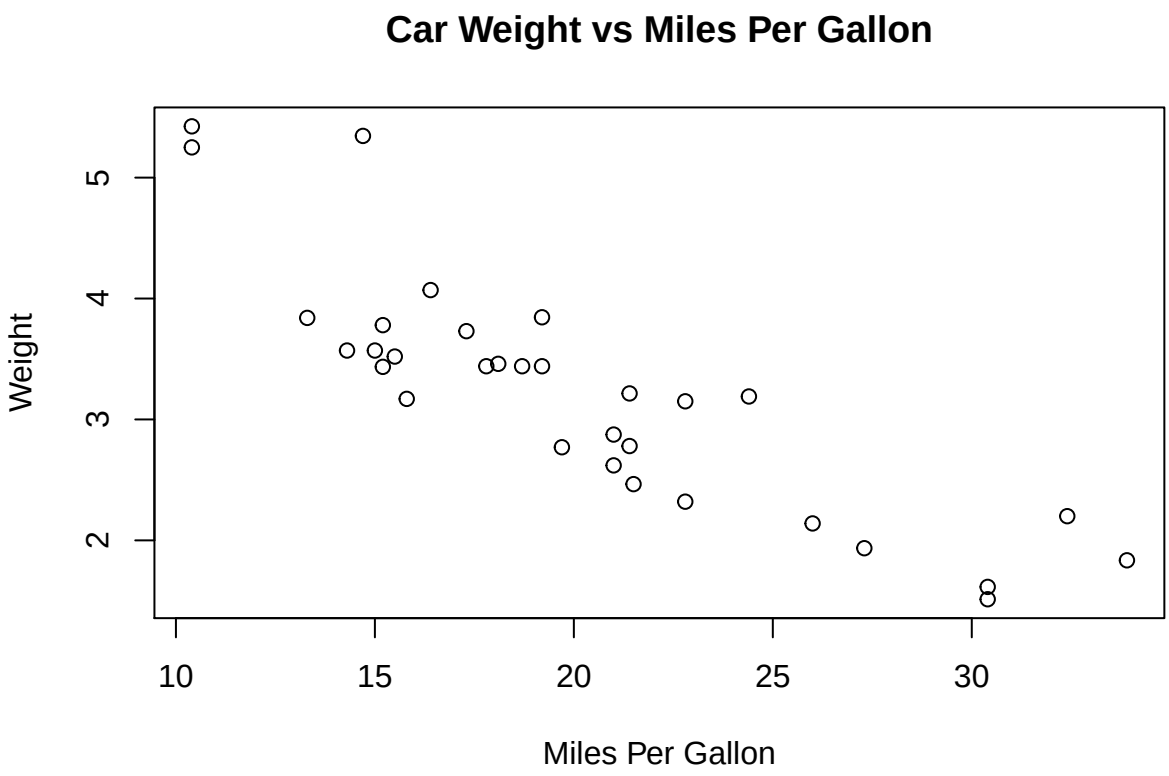
##  Max.   :1.0000   Max.   :5.000   Max.   :8.000
```

Question 2

Use plot() function to produce a graph mpg and wt (weight). Is there a correlation between these two variables?

Answer: There appears to be a relationship. The lighter the car, the more efficient fuel consumption becomes.

```
carsplot <- plot(carsfile$mpg, carsfile$wt,
                 main = "Car Weight vs Miles Per Gallon",
                 xlab = "Miles Per Gallon",
                 ylab = "Weight"
                 )
```



```
carsplot
```

```
## NULL
```

Question 3

Use the table() function to find out how many cars are automatic and how many are manual.

Answer: Where mtcars$am = transmission type: 0 = Automatic, 1 = Manual We derive 19 automatic transmissions and 13 manual transmissions.

There was no requirement to attempt formatting of the table function so I didn't attempt.

```
carstable <- table(mtcars$am)
carstable
```

```
##
##  0  1
## 19 13
```

Question 4

Using the subset() function separate the datasets into 2 datasets based on type of transmission.

Answer:

```r
autocars <- subset(carsfile, am == 0)
autocars
```

```
##                      mpg cyl  disp  hp drat    wt  qsec vs am gear carb
## Hornet 4 Drive      21.4   6 258.0 110 3.08 3.215 19.44  1  0    3    1
